

Statement to the Community
City of Piqua
October 26, 2023

The City of Piqua, with help from Ohio EPA, will be facilitating testing and monitoring of the conditions at the former water plant. As we receive the data and analysis of these testing results, we will share with the community.

Currently, we are reviewing the results of tests conducted on wastewater collected at the site during Energy Storage Response Group's operation. This wastewater was captured, collected, and sent to a contractor for offsite disposal in a legally permitted and highly regulated facility. We will share those results in the coming days.

Additional sampling, of water and soil will be conducted and the City of Piqua will share those testing results with the community.

On November 15, 2023, the City of Piqua and Ohio EPA are hosting a community open house to share updated information and answer community members' questions at the Fort Piqua Plaza in the Ulysses S. Grant Room from 5:00 PM to 7:00 PM.
