Community Health Assessment Snapshot

Miami County-Leading You To Better Health

A report of the key health issues faced by Miami County residents

A process to collect data and analyze the needs of the community has resulted in the Miami County Community Health Assessment (CHA). To learn more about the results, the process, and the identified top priorities visit www.piquaoh.org/city-departments/health-department.

Top Priorities Identified

To move Miami County towards better health and wellness, the CHA revealed work needs to be done to promote better maternal and family health, prevent chronic disease, and establish better mental health and addiction strategies. The assessment has shown that Miami County residents have higher rates of heart disease and diabetes compared to national averages; prenatal care is declining in recent years; and unintentional drug overdoses have increased. These are just a few examples of what the assessment found and what led to the top priorities chosen:

MATERNAL & FAMILY HEALTH

1

CHRONIC DISEASE

2

MENTAL HEALTH & ADDICTION

3

COMMUNITY HEALTH IMPROVEMENT PLAN (CHIP)

The next steps for utilizing the assessment data will be to develop a plan of action. The CHIP will begin the process of working together to improve the health of the community. Strategies to improve will be developed in an effort to move the community towards better health.

Maternal & Family Health

Pre-term births, smoking while pregnant, prenatal care, teen births.

Chronic Disease

Heart disease, diabetes, obesity

Mental Health & Addiction

Drug overdoses, tobacco use, mental health care
